

OUTWARD BOUND
SOUTH AFRICA

ENVIRONMENTAL CHARTER

This Environmental Charter outlines our commitment to making Outward Bound South Africa's operations more sustainable. The Charter contains a set of principles relating to environmental management systems; by adopting the Charter, Outward Bound South Africa publicly declares its commitment to undertake its activities in accordance with these principles.

At Outward Bound South Africa we take environmental sustainability seriously.

We are committed to progressively:

- Reducing our impact and making our activities more sustainable
- Encouraging our participants to be environmentally aware through education and example
- Championing environmental stewardship and individual responsibility

We will work to deliver across the seven core areas of action:

1. Energy

Commit to measuring and reducing their total energy usage and will seek to do this by changing behavior and exploring opportunities for energy efficiency.

2. Travel

Minimize our transport related environmental impact by reducing our annual travel and by utilizing lower carbon modes of travel whenever possible.

3. Water

Minimize our use of water at Outward Bound South Africa and encourage water saving behavior in our staff and participants. We will minimize the effect that our waste-water discharge has on the environment.

4. Waste

Embed the principles of the waste hierarchy (avoid, reduce, reuse, recycle) in all that we do. We will work to phase out our use of single-use plastics.

5. Partners and Suppliers

Work with partners (including contractors, suppliers and vendors) to minimize climate and environmental change impacts and encourage them to act in a more sustainable manner.

6. Program Operation

Minimize our environmental impact and our impact on local communities in the areas in which we operate by implementing the Outward Bound International principles of "Tread Lightly".

7. Environmental Stewardship

Train and encourage our staff and participants to better understand, conserve and protect the natural environment. We will make them more environmentally aware.
